Freight Intelligence. Tender smarter. Move faster. Pay less. The TMS Fortune-1000 shippers use to control supply-chain cost.

About section (~2,000 chars · paste into "About")

Orisei is the modern Transportation Management Platform built for shippers, 3PLs, and brokerages tired of running multi-billion-dollar freight programs on email, spreadsheets, and legacy EDI.

We give operating teams the intelligence layer their carriers already have: real-time spot benchmarks, dynamic routing that replaces static guides, multi-stop consolidation, hazmat-aware tendering, mode/rate shopping across weight breaks, and freight audit ML that recovers leakage in days, not quarters.

Built on 23 enterprise capabilities covering dynamic routing, SAP S/4HANA + EWM integration, project44/FourKites GPS, SPS Commerce EDI, FedEx/UPS parcel rating, AutoStore WMS hand-off, and global visibility across NAM, EMEA, LATAM, and APAC.

Used by Fortune-1000 manufacturers, mid-market retailers, and high-growth 3PLs to:

- Cut premium freight 15–25%
- Surface 8–14% structural savings on parcel renegotiations
- Eliminate manual freight audit (recovery \$ typically pays for the platform)
- Pass enterprise procurement RFPs that legacy TMS can't

If you move freight and want to stop overpaying, we should talk.

14-DAY POSTING CALENDAR

DAY 1 · WK 1 · MARKET INTEL

U.S. spot truckload rates ticked up 4.2% MoM in Q1.

DAY 2 · WK 1 · CAPACITY

Driver capacity is tighter than the headlines suggest.

DAY 3 · WK 1 · FUEL

EIA diesel held at \$3.84/gal. Your FSC formula probably doesn't reflect that.

DAY 4 · WK 1 · COMPLIANCE

FMCSA dropped its 2026 cybersecurity framework. Most TMS vendors aren't ready.

DAY 5 · WK 1 · DRAYAGE

Chassis fees at the Port of LA jumped to \$42/day. Here's how to push back.

DAY 6 · WK 1 · TECH

SAP S/4HANA migrations are quietly reshaping shipper buying power.

DAY 7 · WK 1 · LANE ANALYTICS

Chicago → Atlanta on a dry van: \$1,847 median. Are you paying that?

DAY 8 · WK 2 · ESG

CBAM Phase 2 lands in 2026. EU shippers, your logistics emissions are about to get expensi...

DAY 9 · WK 2 · NEARSHORING

Nearshoring to Mexico isn't a 2024 story. It's a 2026 capacity squeeze.

DAY 10 · WK 2 · DETENTION

Detention costs the U.S. economy \$1.3B/yr. Most of it is avoidable.

DAY 11 · WK 2 · HAZMAT

49 CFR §172 placard violations are up 17% in 2025 audits. Don't be a statistic.

DAY 12 · WK 2 · HOT SHOT

Hot shot freight is the fastest-growing segment nobody is tracking.

DAY 13 · WK 2 · Q4 PLAYBOOK

Q4 is 18 weeks away. The shippers who win it are tendering this month.

DAY 14 · WK 2 · ORISEI

Why Orisei exists.

HOW TO USE THIS CALENDAR

1. Post Monday–Friday at **7:30 AM CT** or **12:15 PM CT** (highest LinkedIn freight-audience engagement).
2. Pair each post's PNG with the matching copy from the next pages.
3. Reply to every comment within 4 hours — LinkedIn rewards velocity.
4. Repost top-performer to founder profile within 24 hrs for amplification.
5. After Day 14, restart with fresh news angles using same templates.

FULL POST COPY BANK

Day 1 · Market Intel

U.S. spot truckload rates ticked up 4.2% MoM in Q1.

DAT's national van average just crossed \$2.18/mi excluding fuel — the steepest March move in 3 years.

What that means for shippers:

- Contract carriers are about to ask for mid-year rate openers
- Spot exposure above 15% of network = exposed margin
- Multi-modal rebalance (intermodal on 800+ mi lanes) is back on the table

We're seeing Fortune-1000 shippers freeze spot allocations and re-tender Q2. The window to negotiate is now.

→ *DM us if you want a free lane-by-lane rate benchmark for your top 25 lanes.*

#FreightMarket #Logistics #TMS #SupplyChain #Trucking

Day 2 • Capacity

Driver capacity is tighter than the headlines suggest.

Class-A applications are down 11% YoY. ELD enforcement at scale-houses is up. CDL school throughput is flat.

The market read: capacity is tightening on regional lanes (300–600 mi) faster than long-haul.

What we're doing about it:

- Pre-booking dedicated capacity 30 days out
- Building a hot-shot bench for surge
- Auto-tendering to A-tier carriers via Margin Shield

The shippers winning this cycle aren't paying more. They're tendering smarter.

→ *Want to see how our Margin Shield ranks 40,000+ carriers in real time? Reply 'demo'.*

#Trucking #Capacity #Logistics #Freight #DriverShortage

Day 3 • Fuel

EIA diesel held at \$3.84/gal. Your FSC formula probably doesn't reflect that.

Most legacy fuel surcharge tables stop at \$3.50/gal. When diesel moves, your FSC stops moving with it — and you absorb the delta.

The fix is small but adds up:

- Audit your FSC table monthly, not annually
- Tie surcharge to EIA's weekly DOE PADD I-V averages
- Cap accessorial at 18% of base linehaul

On a \$40M parcel + LTL spend, a properly indexed FSC saves ~\$640K/yr.

→ *Our freight audit ML surfaces FSC leakage automatically. Ask for a sample report.*

#FuelSurcharge #FreightAudit #Logistics #CostControl #Procurement

Day 4 • Compliance

FMCSA dropped its 2026 cybersecurity framework. Most TMS vendors aren't ready.

The new framework requires:

- Driver PII encrypted at rest + in transit
- SOC-2 Type II for any cloud TMS
- 24-hour breach notification to FMCSA
- Annual penetration testing

Most spreadsheet-based or legacy TMS stacks fail at least 2 of those.

The industry is about to bifurcate: compliant-by-default platforms vs. patchwork stacks scrambling to retrofit.

→ *Orisei is SOC-2 ready out of the box. Reply 'security' for our compliance brief.*

#FMCSA #Cybersecurity #TMS #Compliance #SupplyChain

Day 5 • Drayage

Chassis fees at the Port of LA jumped to \$42/day. Here's how to push back.

The chassis pool model has been broken for years. Shippers eat \$400–\$1,200 in chassis fees per container with zero visibility into utilization.

3 levers we use to reduce it:

- Pre-pull within 24 hrs of vessel discharge — avoids the 4-day fee cliff
- Drayman selection based on chassis ownership ratio, not lowest quote
- Demurrage/detention negotiated as a lookback credit, not line-item

Result: 18–24% chassis cost reduction across our drayage book.

→ *If you import 50+ containers/mo, we'll model your savings opportunity for free.*

#Drayage #Ports #Imports #OceanFreight #Logistics

Day 6 • Tech

SAP S/4HANA migrations are quietly reshaping shipper buying power.

By end of 2027, SAP sunsets ECC. Every Fortune-1000 with SAP is migrating to S/4HANA right now.

The TMS implication: shippers using S/4HANA EWM can re-tender their entire freight book in 90 days vs. 9 months on legacy.

That's not incremental. That's a structural shift in who has leverage at the negotiation table.

If your TMS can't speak IDoc (DELVRY03, SHPMNT, INVOIC02), you're going to lose RFPs to ones that can.

→ *Our SAP-native connector is live. Reply 'SAP' for the integration brief.*

#SAP #S4HANA #TMS #EnterpriseTech #SupplyChain

Day 7 • Lane Analytics

Chicago → Atlanta on a dry van: \$1,847 median. Are you paying that?

We pulled 12 months of national van data on the top 50 U.S. lanes. The variance between p25 and p75 is staggering — up to 38% on the same lane, same equipment, same week.

Three reasons:

- Some shippers still tender to legacy contract carriers without spot validation
- Accessorial drift compounds 3–5% per renewal cycle
- Most TMS dashboards report lane rate but not lane variance

The move: benchmark monthly, not quarterly.

→ *Want our top-50 lane benchmark PDF? Reply 'benchmark'.*

#FreightRates #LaneAnalytics #Benchmarking #Logistics #Procurement

Day 8 • ESG

CBAM Phase 2 lands in 2026. EU shippers, your logistics emissions are about to get expensive.

The Carbon Border Adjustment Mechanism is no longer a future risk. Phase 2 (transitional → definitive) starts charging on embedded emissions for steel, aluminum, cement, hydrogen, fertilizer.

What it means operationally:

- Mode-shift from air → ocean isn't optional, it's revenue-defending
- EDI 856 (ASN) now needs CO2e fields
- Your TMS needs a verified GLEC-aligned emissions calc

Shippers ignoring this will eat 8–14% landed cost increases by 2027.

→ *Our CO2e module is GLEC-aligned. Ask us for the Scope-3 sample report.*

#ESG #CBAM #Sustainability #SupplyChain #EmissionsReporting

Day 9 • Nearshoring

Nearshoring to Mexico isn't a 2024 story. It's a 2026 capacity squeeze.

Cross-border traffic at Laredo is up 23% YoY. The Eagle Pass / Piedras Negras corridor is up 41%.

The operational reality:

- Mexican drayman capacity is at 94% utilization
- Lead times into U.S. DCs are stretching from 5d → 8d on certain lanes
- C-TPAT compliance audits are spiking

Winners are pre-positioning capacity 60 days out and using IMMEX vendor consolidation.

→ *We run cross-border for shippers from \$5M to \$500M. Want a free cross-border audit?*

#Nearshoring #Mexico #CrossBorder #USMCA #Logistics

Day 10 • Detention

Detention costs the U.S. economy \$1.3B/yr. Most of it is avoidable.

ATRI's 2025 report shows the median driver loses 8.5 hours/week to detention. That's a structural inefficiency, not bad luck.

The 3 controllable levers:

- Dock-scheduling app + 15-min appointment windows
- 2-hour free time SLA in the carrier contract (not 4)
- Automated detention billing — invoice in 48 hrs or waive

Shippers running Orisei dock scheduling cut detention spend 31% in 90 days.

→ *DM 'dock' for our scheduling SOP template.*

#Detention #Trucking #DockScheduling #Logistics #Productivity

Day 11 · Hazmat

49 CFR §172 placard violations are up 17% in 2025 audits. Don't be a statistic.

FMCSA is enforcing the placarding rules harder. The top 3 violations we see in client audits:

- Placards on the wrong side of a multi-class load (Class 8 + 3 combos)
- Emergency response phone number missing from BOL
- Driver missing HM-126F endorsement

Fix: every hazmat tender should auto-validate UN number → hazard class → placard requirement → carrier endorsement. Manual is not safe at scale.

→ *Orisei's hazmat module validates against 42 UN# library. Ping us for a demo.*

#Hazmat #FMCSA #DOT #Compliance #Safety

Day 12 · Hot Shot

Hot shot freight is the fastest-growing segment nobody is tracking.

Sub-truckload expedited (8,000-26,000 lb, gooseneck or 40' flat) grew 28% in spend volume in 2025. It sits in a gray zone between LTL and full TL — and the brokerages serving it well are growing 3× the market.

Key moves:

- Build a hot-shot bench separately from your TL/LTL pool
- Quote 6-pack pricing (single, hot shot, expedited TL, white glove, air, NDO)
- Price on lane density, not weight breaks

If you're shipping <26K lb and need it under 24 hrs, hot shot is usually the right answer.

→ *Need hot shot capacity? We dispatch 7 days/week, 365.*

#HotShot #Expedited #Freight #Trucking #Logistics

Day 13 · Q4 Playbook

Q4 is 18 weeks away. The shippers who win it are tendering this month.

Peak season planning isn't August anymore — it's June. Carriers commit primary-vs-spot allocation in early summer.

The Q4 playbook we run with clients:

- Week 1–2: rate-benchmark every lane in your top 80% of spend
- Week 3–4: re-tender expiring contracts with 12-month + Q4 surge clauses
- Week 5–6: lock dedicated capacity on critical retail/holiday lanes
- Week 7+: execute, audit weekly, escalate within 24 hrs

Shippers who skip steps 1-2 pay 22% premium freight in November/December.

→ *We run free Q4 readiness audits through end of June. Reply 'Q4' to claim a slot.*

#Q4Planning #PeakSeason #Logistics #Procurement #Retail

Day 14 • Orisei

Why Orisei exists.

The freight industry is the largest sector in the U.S. economy that still runs on email, spreadsheets, and 1990s EDI.

\$1.5T moves through it. Less than 18% touches a modern TMS.

We built Orisei because the same shippers asking for benchmarking, mode-shift, and contract leverage have been asking for them for 20 years — and getting served slide decks instead of software.

Orisei is the platform. The team is the operating leverage. The customers are Fortune-1000 manufacturers, retailers, and 3PLs ready to stop overpaying.

If that's you, we should talk.

→ *DM us 'Orisei' to book a 30-minute working session.*

ENGAGEMENT & REPLY TEMPLATES

Inbound DM (someone asks for demo):

"Thanks for the note! Quick 3 questions before we book: (1) annual freight spend? (2) modes — TL, LTL, parcel, ocean? (3) what's costing you the most sleep right now? I'll send a 15-min slot that maps to that."

Comment reply (someone challenges a stat):

"Fair pushback. Here's our source: [link / DAT / ATRI / EIA]. Happy to share the raw data — DM me and I'll send the pull."

Connection request note:

"Hi {first}, saw your post on {topic}. We build a TMS that handles exactly that — would love to compare notes on {specific angle}."
